LO: To write an information + ext

THE SKELETON

The skeleton is important to us because it protects our ^{internal} organs such as the heart, lungs, liver and brain. If we didn't have a skeleton we would be like a jelly on the floor. Muscles are attached to our bones to help us move and once the bones are big enough they stop growing. Did you know there are 200 bones in our body?

The skull

Our skull helps protect our brain. If we didn't have a skull our brain will be damaged. Did you know your skull is made up of 14 bones? Also only the lower jaw can move so we can talk and eat.

The ribs

Our strong ribs protect our organs such as heart, lungs and liver. Did you know some people have 12 ribs but some others have more or less? Our ribs are like a cage because they protect our organs.

SUCCESS CRITERIA	
Feature	Capital letters/ Full stops
Statements	
Exclamations	
Question	Command
Coordinating conjunctions - And, But, Or,	So
Subordinating conjunctions - When, If, Because, While	Noun Phrase (Adjective before noun)
Commas for a list	Subheadings (vr 3)

Our spine keeps us upright. If we didn't have a spine we would just be like a blob on the floor. Did you know our spine has 16 ^{strong} bones in our body? Also our spine helps us sit, stand and move. The strong spine starts under your skull and stops at our hips. Did you know our spine is made up of tiny bones our spine is very (in-fact) because the brain sends a message to our spine and all sorts you have to keep your bones healthy. You also have your body is amazing!
